

SGP Outstanding Software Award 2019

assigned to

Rohan Sawhney & Keenan Crane

for the work

BFF: Boundary First Flattening

“Boundary First Flattening (BFF) stands out as a shining example of going above and beyond the typical software release corresponding to a technical paper. The committee saw value in the implementation of a strong technical contribution and also the design of the command line tool and viewer. BFF is being put to use in industry, and will be of help to the Geometry Processing scientific community for years to come.”
